EDUCATION

NIT Tiruchirappalli

B.Tech. in Computer Science

Jun 2020 — Tiruchirappalli, India

Cum. GPA: **9.19 / 10.0**

LINKS

GitHub: Aceee-dev

LinkedIn: anukul-chand

HackerEarth: coolchand5725

SKILLS

Languages
C++, Java, Kotlin, Python, JavaScript

Core
Android, AI/ML (LLM-based systems, agentic workflows), Chromium, Concurrency

Frameworks & Tools
Django, Git, MySQL, Shell, Mockito, JUnit

COURSEWORK

Data Structures & Algorithms

Operating Systems

Database Management Systems

Combinatorics and Graph Theory

Computer Networks

SUMMARY

Software Engineer with 5+ years of experience in Android and Chromium, building scalable features with a focus on performance and reliability.

EXPERIENCE

Samsung Research Institute Bangalore — *Bangalore, India*
Lead Software Engineer — Jan 2021 – Present

- Developed cross-platform features for **Samsung Internet Agent**(Mobile & Desktop), including **MCP** integration and **LLM-driven** browser workflows.
- **Reduced token consumption** by optimizing payloads for agentic browsing with no feature regressions.
- Built **DOM sanitization** and screenshot masking pipelines to remove PII before LLM processing, enhancing privacy and compliance.
- Developed **LLM-powered agents** for **bug resolution, task creation, and code reviews**, improving workflow efficiency.
- Contributed to **Chromium Open Source** (Text Selection, WebViews) resolving compatibility issues, improving performance and feature stability. Chromium profile
- Designed,implemented and shipped **Extract Text**, **Find Text On Image** and **Boarding Pass detection** features in Samsung Internet Browser end to end , leveraging **Chromium renderer internals, DOM traversal, and lifecycle management** for real-time content extraction and finding.
- **Developed an in-place image translation pipeline** using **JNI + IPC + Chromium image stack**, enabling seamless Web API integration
- Eliminated memory leaks and improved stability by migrating legacy **AsyncTasks to Executor-based concurrency**, reducing runtime overhead and lifecycle issues.
- Ensured $> 80\%$ **test coverage** for owned Input module features, strengthening reliability.

MomentText AI — *Remote*
Software Engineer Intern — Jun 2020 – Dec 2020

- Built and deployed **end-to-end backend APIs** for financial data pipelines and risk assessment dashboards using Django.

Samsung Research Institute Bangalore — *Bangalore, India*
Software Engineering Intern — May 2019 – Jul 2019

- Developed user engagement features in **Samsung Pay (Wallet)** using Kotlin and Java, contributing to improved feature adoption.

PROJECTS

MemoClip (Clipboard Manager) — *Electron, TypeScript* — 2025

- Developed a **real-time clipboard monitoring system for windows** with local persistence and fast retrieval.
- Implemented rule-based classification for text/links with sub-categorization (study, news, etc.) with scope of future ML based classification.

AWARDS & ACHIEVEMENTS

2020 *Top 10/60* — Smart India Hackathon (college representative)
2018–19 *Recipient* — RECAL Scholarship
2018 $1^{st}/150$ — Vortex Symposium
2018 $2^{nd}/75$ — AlgoCup
2018 $1^{st}/50$ — CodeCurrents
